SUMMARY

Languages & Software: VB.NET, SQL, C++, IDL, IRAF, Mathematica & L^AT_EX

Physics: Radiative Transfer, Fourier Analysis, & Spectrophotometry

Math: Risk Analysis, Modelling, Nonlinear Root-finding, & Numerical Interpolation

EXPERIENCE

Color Scientist

Apr 2012 - Aug 2013

PPG Industries, Strongsville, OH

- Developed software for spectroscopic profile analysis on color match samples, radiative transfer models on simple paint mixtures to determine formulation methods, and risk analysis on new technology and models that we deliver to our customers.
- Detailed achievements:
 - 40% marked improvement on color matching software algorithm
 - Developed cross-instrument correlation software for risk analysis project
 - Debugged optimization function for numerical solutions to the radiative transfer equation

Adjunct Professor

Aug 2010 - Jun 2011

Physics Department, Miami University

- Developed curricula in introductory physics & astronomy courses

Adjunct Professor

Feb 2011 - Jun 2011

Physics Department, Cincinnati State

- Designed a technical physics curriculum for remedial students

EDUCATION

Master of Science, Physics

University of Cincinnati, December 2010

Thesis: Massive Stellar Clusters in the Disk of the Milky Way Galaxy

Bachelor of Fine Arts, Printmaking

Ohio University, June 2004

Thesis: A Novel Method for Low-Toxic Photo-Etch Printing

Post Graduate Courses

Hands On Technology Transfer

- Windows Forms 4.5 Programming

University of Washington

- Mathematical Methods for Quantitative Finance
- Building an Information Risk Management Toolkit
- Computer Networks
- Computational Methods for Data Analysis

The University of Edinburgh (2014)

- Artificial Intelligence Planning
- Astrobiology
- Critical Thinking in Global Challenges
